✓ Detection of nitrate and nitrite ions by means of phenylanthranilic acid. N. A. Bilye and P. I. Goncharov. *Ukrain. Khim. Zhur.* 20, 303-10(1954); cf. N. A. Bilye, *Trudy Odeskogo Gosudarst. Univ. im. I. I. Mechnikova, Sbornik Khim. Fakul'teta* 3, 129(1953).—In a strong H_2SO_4 soln. phenylanthranilic acid reacts with NO_3^- to give products ranging from pink-violet to dark-violet depending on the amt. of NO_3^- . Under similar conditions NO_2^- yields products ranging from yellow to dark-violet depending on the concn. of NO_3^- . In a strong HCl soln. phenylanthranilic acid reacts only with NO_3^- . To test for NO_3^- in the presence or absence of NO_2^- place 1 ml. of soln. in a test tube, add 1 drop of 0.1% phenylanthranilic acid soln., mix, and add 1-3 ml. of concd. HCl along the walls of the test tube. The characteristic color will appear at the point of contact. Shaking spreads the color throughout the soln. In the absence of NO_3^- , NO_2^- is detected in an analogous manner by using H_2SO_4 in place of HCl. If NO_2^- is present, it is destroyed with cryst. NH_4Cl in an AcOH soln. before the test for NO_3^- . M. Hosh

Title : Agrobiological Peculiarities of Mohar and
Foxtail Millet in Omskaya Oblast'

Orig Pub : Zemledeliye, 1957, No 3, 30-34

Abstract : Experiments on the cultivation of mohar and
foxtail millet show that they are capable of
giving high yields of hay and seeds even in
dry years. In addition, they withstand spring
frosts well and suffer considerably from fall
frost. The above surface part of the plants
perished totally as a result of fall frost
during 1955 (-1.70). The seeds can keep their
germination capacity rather well if they are

stored, even for a long time, in a dry and
aerated space. MS-1, Barkhatnyy 83, Krasnokut-
skiy 461, Karagandinskiy 242 are the best
mohar varieties for the Omskaya Oblast';
Nemchinovskaya 6 and Sibirskaya 56 are the
best foxtail millet varieties. Omskiy 10 mohar
variety and Novosibirskaya 1 - foxtail millet
varieties are of interest to the Northern
regions. In the experiments conducted at the
Siberian Scientific Research Agricultural
Institute on the study of the time of sowing
the highest yield of hay were obtained when
the sowing took place during the third ten
day period in May. The action of MCPA herbi-
cide was studied on mohar sowings. Treatment
with 1150 g of the preparation per 1 ha in the

AUTHOR: Goncharov, P.P., Professor

TITLE: Some Problems of Modern Clinical Pathology (Nekotoryye voprosy sovremennoy klinicheskoy patologii). According to Data of the Third International Congress (Po materialam 3-go mezhdunarodnogo Kongressa).

PERIODICAL: Voenno-meditsinskiy zhurnal, 1958, Nr 5, pp 18 - 26 (USSR)

ABSTRACT: The author reports on the Third Congress on Modern Clinical Pathology which took place in Brussels in July 1957. Papers were read by French, Swiss, English, American, Belgian and Polish physicians. J. Szyszkowicz, D. Borecka and K. Ruszczyk (Warsaw) read important papers on the "Lungs as an organ for drawing out bacteria that had entered the blood stream". Papers read on the use and misuse of antibiotics are commented on by the author by pointing out Soviet clinician V.N. Shamov's endeavors to stop any unnecessary and exaggerated use of antibi-
